MEMORANDUM FOR: Intelligence Advisory Committee
through Chief, COAPS

SUBJECT: Failure to Receive Counterespionage Information
Having Positive Intelligence Value

1. Enclosure 1 hereto is a memorandum from the Joint Atomic Energy Intelligence Committee concerning the failure of counter-espionage elements to transmit counterespionage information having positive intelligence value in relation to Soviet capabilities for the production of atomic weapons.

2. The SIC recommends the establishment of a policy for providing substantive information derived from counter-intelligence sources which may have positive intelligence value to selected personnel in the intelligence producing elements of the IAC agencies. It is also recommended that the counter-intelligence agencies be represented by means of ad hoc membership on the SIC in order to achieve continuing liaison.
